

Andy:

Pls discuss with Paul and  
let me know where we are.

13 September 1985

STAT

MEMORANDUM FOR: [Redacted]  
Deputy Chief, NBPO/OL

STAT

FROM : [Redacted]  
Chief, Security Staff, NBPO

SUBJECT : Shortage of Technical Security Monitors

1. The following information relevant to the subject is provided below, as you requested during our conversation of 5 September 1985.

2. There are currently six (6) Independent Contractors (IC) on site working as Technical Monitors (TSM). One works full time, the other five work a week-on-week-off schedule. These TSMs are being supported by eight (8) ICs who have some Technical Security knowledge which is being supplemented by security refresher courses and on-the-job-training. All eight work a week-on-week-off schedule.

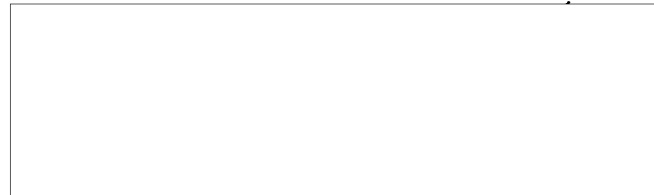

STAT

3. It has been projected by [Redacted] Chief, OPS/PAS/OS that the construction site will require a minimum of ten (10) TSMs per day during peak construction in 1986 - 1987. The above figure is based upon the contract specifications which state, in part, "--the normal work week is to be Monday thru Friday, from 0630 to 1600 hours." Any increase in the number of work hours per day or work days per week naturally increases the total on-site security manpower requirements.

4. In summary, site security will need an additional thirteen (13) TSMs in early 1986 to support the normal construction work week.

5. Your offer to help alleviate this manpower shortage is greatly appreciated by Site Security.
